

## Microsoft SharePoint® Case Study

### Business Challenge

A large insurance broker required a system to manage and maintain insurance certificates for the aerospace industry that would meet the following requirements:

- Enable the upload of 20,000 documents a year
- Allow for upload of documents in bulk
- Allow for granular control of security on the documents to allow clients to retrieve the documents online

It was imperative that the new system be delivered within three months to avoid implementation of a costly manual work-around.

### Kforce Global Solution

Kforce Global Solutions was tasked to provide end-to-end development services for the project using a SharePoint®-based application that implemented Microsoft®.NET web application pages. The system allows users to upload single or multiple documents that can be deactivated or renewed. File-level permission was also implemented, allowing a SharePoint® group or individual to have read-only access to uploaded documents.

Specifically, a Kforce Global Solutions architect provided the Technical Design Specification for the project, including a technical overview of the user interface, components, and data structures that support the system. This ensured that the technical team had a full understanding of the approach and that the design was compliant with internal practices.

To deliver the software, a five-person development team comprised of one Project Manager, one Solution Architect / Technical Lead, two Developers, and one QA was assembled to meet the project's critical time constraints without exceeding cost thresholds.

### Results

The system was delivered on-time, on-budget, and provided the necessary functionality. The project was also successful in that it minimized impact to existing client resources.

### Environment

- Microsoft SharePoint® (WSS 3.0)
- Microsoft® C#
- Microsoft® .NET Framework 3.5

### INDUSTRIES SERVED

- Financial Services
- Insurance
- Healthcare
- IT Products/Services
- Manufacturing
- Pharmaceutical

### KFORCE GLOBAL SOLUTIONS CAPABILITIES

- Application Development and Support
- Legacy Application Support
- Web Development
- Infrastructure Support and Service Desk
- Business Process Management
- Quality Assurance
- Staff Augmentation
